DECODE UPSC with Mounika

Recording on camera

A one-page guide for next week's videos

What changes

You record the **whole script on camera**, just as you read it now. **I choose when your face appears**, following the layout written in the script:

In the script	What viewers see	Used for
[FACE]	You, full screen, with your name below	Opening, warm-up question, moving between topics, the three tricks, closing
[SPLIT]	You on the left, the slide on the right	Topic title slides
[CORNER]	A small circle of you in the corner	Long explanation slides
(no tag)	The slide full screen, with your voice	News, tables, maps, traps, MCQs, notes

Your face will be on screen for about 15–20% of the video. Students read and copy everything else full screen.

Setting up (5 minutes)

1. **Phone:** horizontal, at eye level, about an arm's length away, on a stand or a pile of books. Set the camera to **1080p, 30 fps**.
2. **Light:** a window or lamp **in front of you**, never behind you.
3. **Background:** plain or tidy. A bookshelf looks good.
4. **Sound:** a wired or lapel mic if you have one. Choose a quiet room with the fan off.
5. **Eyes:** look into the **camera lens**, not the screen. Keep the script just below the lens.

While recording

- Read the script in order, in a few parts. For example, Grid topics 1–8, then 9–16, then the AP–TG Desk.
- If you make a mistake, **pause, say "retake"**, and read the whole sentence again. I cut it out.
- **No need to pause at the questions.** I add the countdowns.
- Smile on the opening, the tricks and the closing. Those are the moments on camera.

Sending the videos

Video files are big, so **upload them to Google Drive** and send me the share link ("Anyone with the link"). For me to download them, **drive.google.com** must be allowed in the environment's network settings. Name the files `grid_part1.mp4`, `grid_part2.mp4`, `desk.mp4`, and so on.
